Leviathan Core Private Equity Holdco ("LPEH")

Fact Sheet · September 2026 Update

INTERNAL INVESTMENT-COMMITTEE PLANNING DOCUMENT · HIGHLY CONFIDENTIAL & TRADE
SECRET

A Letter to Our Investors

SEPTEMBER 2026 · FROM THE DESK OF DONALD BRITTS III · Leviathan Core Private Equity Holdco ("LPEH")

The world is re-industrialising around two imperatives: the United States must insulate its semiconductor and artificial-intelligence supply chain from a single point of failure in the Taiwan Strait, and the West must rebuild the capacity to produce weapons and munitions at scale. Those two imperatives are one trend viewed from two angles, and LPEH is built to own both legs of it while a third sleeve compounds on the most durable force in any economy: the household balance sheet. Across 27 holdings and \$840M of committed capital, our model points to a 19.9% probability-weighted net IRR and a 3.56x net multiple over a 7-year hold, beating the public defense-and-semiconductor basket on a public-market-equivalent basis in every scenario we underwrite.

I. IQT Semi / AI — the sovereign chokepoints (\$250M, 30%)

Nine names, anchored by Substrate, mirror the In-Q-Tel playbook: own the nodes a nation cannot do without if Taiwan goes dark. Domestic X-ray lithography, at-wavelength EUV metrology, substrate materials that break a single-supplier monopoly, edge-AI silicon that works when the cloud is jammed, and quantum compute built on existing CMOS lines. Every name is scored on five strategic axes, and that score drives its re-rating in a TSMC-Shock. This is the convex leg of the book: it earns a 15.2% base-case net IRR and 26.3% in the shock case precisely because the names we hold are the ones Washington will pay any price for.

II. Defense — the physical effectors (\$390M, 46%)

If the IQT sleeve is the brain, the Weapons sleeve is the hands. Naval autonomy, directed energy, energetics, missile forgings and the primes that integrate them are the beneficiaries of NATO's five-percent pledge and an American munitions base that has been drawn down to levels not seen in generations. Each position carries an explicit munitions-shortage and foreign-military-sales backlog score that lifts its growth path. The sleeve is the cash-generative core of the holdco: 16.7% base-case net, 21.0% expected, and a 2.08x public-market equivalent against the S&P 500.

III. Consumer Discretionary — the demographic engine (\$200M, 24%)

Our consumer sleeve is not a bet on the consumer; it is a bet on *which* consumer. Every name is scored on its addressable market across the cohorts in or entering their prime earning years, while deliberately retaining exposure to the baby boomers as they carry the largest wealth transfer in history into retirement. Direct-to-consumer essentials, wearable health, membership grocery, fresh pet food, payments and marketplaces: businesses that sell to every cohort and scale with the one that is spending. It is the sleeve that pays distributions first, at a 17.7% base-case net IRR, and the one that is uncorrelated with everything else we own.

IV. Why the three belong together

The IQT and Defense sleeves are intentionally correlated. Semiconductor insulation and munitions scale are funded by the same appropriations, driven by the same adversary and accelerated by the same shock. Together they are 76% of the holdco and move as one factor, which is the point: we want maximum exposure to the sovereign-capital supercycle, and we want the two legs to reinforce each other operationally. Edge-AI silicon from the first sleeve goes into the autonomous vessels and counter-drone systems of the second; the primes in the second are the natural acquirers of the first. The consumer sleeve sits apart from that factor by design. It provides early DPI, lowers dispersion, and in the one scenario that hurts it, a Taiwan shock, the other two sleeves more than compensate, which is why the holdco's expected net return rises in that case rather than falls. One factor for conviction, one ballast for durability, and a single waterfall that lets the strong sleeves carry the weak before any carry is charged. That is LPEH.

THIS IS AN INTERNAL INVESTMENT-COMMITTEE PLANNING DOCUMENT. IT IS A MODEL-BASED ILLUSTRATION PREPARED FOR LEVIATHAN'S PRINCIPALS AND ADVISERS. FIGURES ARE MODELLED OUTCOMES, NOT REALISED PERFORMANCE, AND DO NOT CONSTITUTE AN OFFER, A SOLICITATION OR INVESTMENT ADVICE. NOT FOR DISTRIBUTION TO CLIENTS OR THE GENERAL PUBLIC.

LPEH

SEPTEMBER 2026

Leviathan Core Private Equity Holdco ("LPEH")

LPEH is a \$840M three-sleeve private equity holding vehicle that gives Leviathan's principals exposure to the defense supercycle, the In-Q-Tel-mirror semiconductor / AI stack and a consumer-discretionary ballast⁽¹⁾ through a single commitment.

\$840M

holdco committed capital
three sub-vehicles, 27 holdings

19.9%

expected net IRR to LPs
(probability-weighted, 7-year hold)⁽²⁾

3.56x

expected net MOIC / DPI at exit
(7-year hold)⁽²⁾

Sub-Vehicle Spotlight⁽³⁾

\$390M

Physical-layer defense effectors · 9 holdings · 46% of holdco

Defense — Cash-generative supercycle core

\$250M

IQT-mirror deep-tech & semiconductors · 9 holdings · 30% of holdco

IQT Semi / AI — Convex optionality / tail hedge

\$200M

DTC, wellness & marketplaces · cohort-weighted TAM · 9 holdings · 24% of holdco

Consumer Discretionary — Ballast + near-term DPI engine

Performance Summary⁽⁴⁾

(net IRR to LPs by scenario, 7-year hold; MOIC gross of fees, Base case)

Sub-vehicle	Committed	% Holdco	Holdings	Gross MOIC	Base	Bull	Bear	TSMC-Shock	Expected
Defense	\$390M	46%	9	3.42x	16.7%	28.6%	0.7%	28.6%	21.0%
IQT Semi / AI	\$250M	30%	9	3.11x	15.2%	25.8%	-17.5%	26.3%	18.4%
Consumer Discretionary	\$200M	24%	9	3.67x	17.7%	32.9%	-5.2%	-18.4%	19.0%
LPEH Holdco (cross-collateralised)	\$840M	100%	27	3.39x	16.5%	29.0%	-4.4%	23.4%	19.9%

Please reference page 4 for the full scenario tables. See "Modelled Returns" on page 6 for how net figures are derived. Sub-vehicle rows are stand-alone waterfalls; the holdco row nets the three sleeves under one preferred return and one carry.

Modelled outcomes are not forecasts and do not predict future returns. All figures are outputs of Leviathan's internal IC model as of 22-Sep-2026. Six of the nine IQT-sleeve entry marks and most Weapons-sleeve marks are estimates pending primary cap-table access; the TSMC-Shock case is a deliberately low-probability tail. Investment examples are shown for illustration and may not be representative of the vehicle's eventual portfolio.

Note: Please refer to pages 5–6 for key terms, sourcing and endnotes 1–12. For a more detailed description of the model's wiring, assumptions and caveats, refer to the Read Me, Checks and Change Log tabs of the v3 workbook.

LPEH's Scaled and Diversified Portfolio

3

sub-vehicles⁽ⁱ⁾

27

portfolio holdings⁽ⁱⁱ⁾

4

return scenarios underwritten⁽ⁱⁱⁱ⁾

Sub-Vehicle Breakdown⁽⁵⁾

(% of committed capital)⁽⁹⁾

Sector Breakdown⁽⁶⁾

(% of committed capital)⁽⁹⁾

Regional Breakdown⁽⁷⁾

(% of committed capital)⁽⁹⁾

Stage & Liquidity Breakdown⁽⁸⁾

(% of committed capital)⁽⁹⁾

There can be no assurance that LPEH will achieve its objectives, avoid substantial losses or source or execute transactions relating to the above themes. Several positions are access-constrained (employee-owned, closely held, IPO-pending or secondary-only) and the final allocation may differ materially from the modelled book. Diversification does not ensure a profit or protect against losses. Sector, regional and stage classifications are Leviathan's own and are made in its sole discretion.

Note: Financial data is modelled and unaudited. Please refer to pages 5–6 for key terms and endnotes 1–12. (i) Defense (Weapons sleeve), IQT Semi / AI (IQT-mirror sleeve) and Consumer Discretionary (Consumer / Value sleeve). (ii) 27 named holdings across the three sleeves; checks sum to exactly \$840M. (iii) Base, Bull, Bear and TSMC-Shock, weighted 45% / 25% / 15% / 15% to form the Expected case.

Leviathan's Thematic Pillar Spotlight: Defense Supercycle⁽³⁾⁽¹⁰⁾

Defense Supercycle anchors the holdco in the two sleeves that are long the geopolitical cycle: physical-layer effectors and the semiconductor / AI stack beneath them

Weapons: cash-generative defense opex — munitions, autonomy, directed energy and counter-drone demand pulled by NATO's 5%-of-GDP pledge and US replenishment budgets; each name's CAGR carries a munitions-shortage / FMS-backlog overlay⁽¹⁰⁾

Spotlight: Saronic

SARONIC

■ Investment in a leading autonomous naval-surface-vessel platform scaling under the US Navy's Replicator programme

\$9.25B

entry post-money valuation
(Series D, Mar-26)

● — Naval autonomy is among the fastest-growing defense budget lines; the company's 2025 revenue scaled roughly 15x year-on-year

● — Modelled at a 26% Base-case gross CAGR, with the TSMC-Shock case re-rating conflict-driven demand higher

\$70M

LPEH check — largest
position in the holdco (8.3%
of committed capital)

● — Ownership kept deliberately small (0.8%) given the late entry mark; value creation comes from programme-of-record wins and a public-market exit window

Top 10 Largest Positions⁽¹¹⁾

Represents ~58% of committed capital

Investment	Sub-vehicle	Check	Description
Substrate	IQT Semi / AI	\$80.0M	Domestic X-ray lithography platform; the sovereign-litho anchor of the sleeve
Saronic	Defense	\$70.0M	Autonomous naval surface vessels; Series D \$9.25B
The Ellwood Group	Defense	\$50.0M	Family-owned forger of missile casings and naval open/closed-die forgings
Epirus	Defense	\$45.0M	High-power microwave directed-energy counter-drone systems
Stripe	Consumer Discretionary	\$45.0M	Global payments infrastructure; \$159B employee tender
Israel Aerospace Ind.	Defense	\$40.0M	Israeli aerospace and defense prime; IPO attempt H2-26
Helicon Chemical	Defense	\$40.0M	Early-growth energetics and propellant chemistry
Superior & Grand Valley	Defense	\$40.0M	Private forger for missile-procurement metal forgings; placeholder mark
Applied Research Assoc.	Defense	\$40.0M	Employee-owned defense R&D and engineering services
Heckler & Koch	Defense	\$35.0M	Listed small-arms manufacturer; closely held, block access

There can be no assurance that any Leviathan vehicle or investment will achieve its objectives or avoid substantial losses, or that Leviathan will source or execute transactions relating to the above themes and opportunities. The investment examples presented herein are modelled target positions, several of which depend on secondary, tender, cornerstone or block access that has not been secured. There is no assurance that the trends described herein will continue or will not reverse.

Note: Entry marks are as of 22-Sep-2026 and reflect the latest priced round, live secondary quote or Leviathan estimate as flagged in the model. Please refer to pages 5–6 for key terms and endnotes.

Modelled Net Return⁽⁴⁾

(net IRR to LPs, % per annum, after management fee, preferred return and carried interest)

Holdco	Base	Bull	Bear	TSMC-Shock	Expected
5-year hold	16.1%	28.0%	-4.7%	21.4%	18.4%
7-year hold	16.5%	29.0%	-4.4%	23.4%	19.9%
10-year hold	17.1%	30.1%	-4.0%	25.7%	21.9%

Net Multiple of Invested Capital

(net MOIC to LPs; paid-in assumed fully drawn, so DPI = TVPI at exit)

Holdco	Base	Bull	Bear	TSMC-Shock	Expected
5-year hold	2.11x	3.44x	0.78x	2.64x	2.32x
7-year hold	2.91x	5.93x	0.73x	4.35x	3.56x
10-year hold	4.84x	13.92x	0.67x	9.82x	7.23x

Sub-Vehicle Net Returns, 7-Year Hold

(stand-alone sleeve waterfalls; holdco row is cross-collateralised)

Sub-vehicle	Base	Bull	Bear	TSMC-Shock	Expected IRR	Expected MOIC	KS-PME vs S&P
Defense	16.7%	28.6%	0.7%	28.6%	21.0%	3.81x	2.08x
IQT Semi / AI	15.2%	25.8%	-17.5%	26.3%	18.4%	3.27x	1.79x
Consumer Discretionary	17.7%	32.9%	-5.2%	-18.4%	19.0%	3.39x	1.85x
LPEH Holdco	16.5%	29.0%	-4.4%	23.4%	19.9%	3.56x	1.95x

Public-Market Equivalent & Proceeds — Expected Case⁽²⁾

(Kaplan-Schoar PME > 1.00x = beats the index; benchmarks 9.0% S&P 500, 13.0% Nasdaq-100, 15.0% Defense+Semis basket)

Holdco	vs S&P 500	vs Nasdaq-100	vs Defense+Semis	Gross MOIC	Net MOIC	Net proceeds
5-year hold	1.51x	1.26x	1.15x	2.68x	2.32x	\$1,951.0M
7-year hold	1.95x	1.51x	1.34x	4.22x	3.56x	\$2,987.3M
10-year hold	3.06x	2.13x	1.79x	8.80x	7.23x	\$6,076.5M

Modelled outcomes do not predict future returns. Returns are single-terminal-exit illustrations: proceeds = check × (1 + CAGR)^{hold} × retention, with fees charged on committed capital over the full hold and a whole-fund European waterfall with no GP catch-up. IRRs are therefore annualised multiples, not cash-flow IRRs, and will differ from realised figures once capital is drawn and distributed over time.

Note: Financial data is modelled and unaudited and sourced from Leviathan's internal IC model (v3, 22-Sep-2026). Expected = probability-weighted across the four scenarios at the weights shown on page 5.

Summary of Key Terms

Key Terms	Description
Vehicle	Leviathan Core Private Equity Holdco: a \$840M holding company owning three sub-vehicles, modelled on a committed-capital basis⁽¹⁾
Sub-vehicles	Defense (Weapons sleeve, \$390M) · IQT Semi / AI (IQT-mirror sleeve, \$250M) · Consumer Discretionary (Consumer / Value sleeve, \$200M)
Hold periods	5 / 7 / 10 years modelled; the 7-year vehicle is the recommended underwriting case - Follow-on reserve of \$25M within the IQT sleeve, steered pro-rata to Substrate, EUV Tech and EdgeCortex
Dilution / retention⁽⁵⁾	Ownership retained at short / mid / long hold — IQT 85% / 78% / 68%; Weapons 92% / 88% / 82%; Consumer 90% / 84% / 75%
Scenario weights⁽²⁾	- Base / Bull / Bear / TSMC-Shock = 45% / 25% / 15% / 15% - TSMC-Shock CAGRs for the IQT sleeve are derived from a five-axis strategic score (China-race criticality, Taiwan insulation, government embeddedness, CFIUS-clean sovereignty, chokepoint leverage)
Cohort overlay⁽¹²⁾	Consumer-sleeve CAGRs carry a demographic cohort-exposure uplift: TAM scored 0–5 per name across prime-earning (35–54), entering-prime (22–34) and retiring-boomer (60+) cohorts, weighted 50% / 30% / 20%, at 0.5% / 0.8% / 0.4% / 0.3% per point (Base / Bull / Bear / Shock); average exposure score 3.4
Benchmarks	S&P 500 9.0%, Nasdaq-100 13.0%, Defense+Semis thematic basket 15.0% forward (50/50 ITA/SOXX, tempered from a ~26% trailing five-year blend)
Reference currency	USD; all figures in USD millions unless noted

Costs	Fees	Terms applied in the model
Ongoing costs	Management fee	2.0% per annum of committed capital, charged over the full hold
	Preferred return	8% per annum, compounded, returned to LPs before any carry
Incidental costs	Carried interest	20% of profits above the preferred return; Whole-fund European, no GP catch-up
Not modelled	Organisational, transaction and secondary-access costs	Excluded; a feeder or SPV wrapper for access-constrained names would add a layer of cost not reflected here

The sub-vehicle figures on pages 1 and 4 apply the same fee, preferred-return and carry terms to each sleeve on a stand-alone basis. The holdco figures net the three sleeves under a single waterfall, so strong sleeves offset weak ones before carry is charged; the difference is reported on the Sleeve Economics tab of the model as the cross-sleeve netting effect.

Note: The information above is a summary of the terms as modelled only and is qualified in its entirety by the governing documents of any vehicle ultimately formed. Capitalised terms not defined have the meanings given in the model's Read Me tab.

Endnotes

Note: All figures presented are as of 22-Sep-2026 unless otherwise indicated and are outputs of the Leviathan Core PE Holdco model, v3 optimisation pass dated 02-Oct-2026. “LPEH”, “the holdco” and “the vehicle” refer to Leviathan Core Private Equity Holdco. Leviathan runs four vehicles (~\$1.5B AUM in total); this fact sheet covers only the core PE holdco and its three sub-vehicles.

(1) Committed-capital basis. Paid-in capital is assumed fully drawn at inception, so Net DPI equals Net MOIC and RVPI is zero at exit (TVPI = DPI).

(2) “Expected” figures are probability-weighted across the four scenarios (Base / Bull / Bear / TSMC-Shock = 45% / 25% / 15% / 15%). Each line of the net waterfall is weighted separately and ratios are then derived from the weighted net proceeds, so Expected net figures are the expected value of LP proceeds rather than the waterfall applied to expected gross proceeds. Headline figures use the 7-year hold.

(3) The sub-vehicle and investment examples presented reflect the modelled target book as of 22-Sep-2026. They are shown to illustrate the vehicle’s themes and are not a representation that any position will be acquired on the modelled terms. Several names require secondary, tender, cornerstone or block access that has not been secured.

(4) Net returns are after a 2.0% management fee on committed capital over the full hold, an 8% compounded preferred return and 20% carried interest under a whole-fund European waterfall with no GP catch-up. Gross and net IRRs are annualised multiples $((\text{proceeds} / \text{capital})^{1/\text{hold}} - 1)$, not cash-flow IRRs; a wipe-out is shown as -100%.

(5) Retention is the share of entry ownership kept after follow-on dilution, applied to exit proceeds, and is set per sleeve and per hold.

(6) “Sector Breakdown” groups holdings into Leviathan’s ten thematic sectors by committed check. Classifications are made in Leviathan’s sole discretion; different criteria could result in materially different classifications.

(7) “Regional Breakdown” is by principal place of business. DefendEye (US HQ, Polish manufacturing, EU cap table) is classified North America. Allied-nation names (EdgeCortix, Diraq) are minority-only positions.

(8) “Stage & Liquidity Breakdown” reflects the entry route: listed shares, pre-IPO / IPO-track names, late-stage private rounds, tenders and secondaries, growth-stage primaries, and seed / early rounds.

(9) Represents LPEH’s modelled committed capital of \$840M; all breakdowns are percentages of that total and may not sum to 100% due

to rounding.

(10) “Thematic Pillar” is selected from the drivers set out on the model’s Macro Overlay tab (NATO 5%-of-GDP pledge, US munitions and autonomy budgets, classified / black-budget growth, China decoupling and CHIPS reshoring). Saronic entry mark: Series D, March 2026, \$9.25B post-money; 2025 revenue of approximately \$200M. Weapons-sleeve CAGRs are the base assumptions plus an exposure-score uplift (average of munitions-shortage and FMS / export-backlog scores, 0–5) at per-point rates set on the Weapons Sleeve tab.

(11) Top 10 positions are the ten largest modelled checks by committed capital and are listed in descending order of check size.

(12) The cohort overlay mirrors the Weapons-sleeve munitions / FMS overlay. Scores reflect Leviathan’s judgment of each name’s addressable market across cohorts in or entering their prime earning years while retaining boomer TAM through retirement; they are levers, not facts. The two defense sleeves (IQT Semi / AI and Defense) are deliberately co-exposed to the same driver, US insulation of the semiconductor / AI supply chain and munitions production scale, so roughly 76% of committed capital moves on one macro factor; the Consumer sleeve is the uncorrelated ballast.

Modelled returns. The model compounds a per-name CAGR over a single terminal exit; it does not model interim cash flows, recycling, credit facilities, FX, taxes or organisational expenses. Six of nine IQT-sleeve entry marks and most Weapons-sleeve marks are estimates pending primary cap-table access; two Consumer-sleeve marks (Made In Cookware, Plunge) have no market reference and Goat Group’s last priced round is from June 2021. The TSMC-Shock case is a deliberately low-probability tail whose compounded CAGRs produce very large multiples by design; its weight should be kept honest.

Important disclosure. This material is prepared solely for Leviathan’s investment committee and professional advisers and must not be reproduced or distributed to any other person. It is not an offer to sell or a solicitation of an offer to buy any security, and nothing herein is investment, legal or tax advice. Alternative investments are speculative, typically carry higher fees, are illiquid, may employ leverage and involve a high degree of risk, including the possible loss of the entire investment. Opinions expressed are those of Leviathan as of the date hereof and are subject to change without notice. Visual design of this document follows a conventional institutional fact-card layout; it is not affiliated with, endorsed by or derived from any third-party manager’s materials.
